News from the Stars:

OR, AN

EPHEMERIS

For the YEAR 1690.

WITH

Observations upon the *Eclipses*, *Solar Ingresses* and *Configurations* of Heaven happening therein.

Being the Second in the Bissextile, or Leap-year

And from the *Creation* of the WORLD, according to the best of *History*, 5639 years.

WHEREIN

You have an *Account* of many things about the *Heavenly Bodies*, and their *Portents* in the said *YEAR*.

By WILLIAM ANDREWS, Student in *Astrology*.

Deus in adjutorium.

LONDON,

Printed by William Bonny for the Company of Stationers, 1690.

Astronomical Calculations, 1690.

	D.	′	″
THE *Eccentricity* of the *Sun*, is	2	2	4
The *Obliquity* of the *Ecliptick*	23	31	3
The *Precession* of the *Equinoxes*	29	33	5
The True length of the *Tropical Year* 365. Days	5h.	58	5

The places of the Apogæons of the Planets.

	D.	′	″	
THE *Apogæon* of *Saturn* is	28	30	0	♑
Of *Jupiter*	9	5	14	♏
Of *Mars*	0	40	4	♏
Of the *Sun*	7	15	36	♐
Of *Venus*	1	39	46	♐
Of *Mercury*	3	19	51	♐

Of the Eclipses, this present Year 1690.

THERE will be *Four Eclipses* in this *Year*, viz. *Two* of the *Sun*, and as *many* of the *Moon*; whereof, only *One* of the *Moon*, on the *Fourteenth* Day of *March*, will be visible in our *Horizon*. The *Eclipses*, are all herein mentioned, in the several, and respective *Months*, of this *Year*, where they happen; unto which I refer you, *&c.*

The Oriental *and* Occidental, *Rising and Setting of the* 5 Planets, *before, and after the* Sun, *this present Year*, 1650.

Saturn is *Oriental* and a *morning Star*, at the beginning of this *Year*, and so continues, until the 24*th*. day of *April*: Then *he* becomes *Occidental*, and an *evening Star*, until the 22*d*. day of *November*; and from thence *he* is a *morning Star*, to the Years end.

Jupiter is *Occidental*, and an *evening Star*, at the beginning of the *Year*, until the 21*st*. day of *February*: then *he* becomes *Oriental*, and is from thence a *morning Star*, unto the 14*th*. day of *September*; and then *he* becomes *Occidental*, and is an *evening Star* again, and so continues to the *Years end*.

Mars is *Occidental*, and an *evening Star*, at the beginning of the *Year*, and so continues until the 20*th*. day of *September*; then *he* becomes a *morning Star*, the residue of the *Year*.

Venus is a *Bright Glorious morning Star*, at the beginning of the *Year*, until the 6*th*. day of *April*; then *she* becomes *Occidental*, and is an *evening Star*, to the *Years* end.

Mercury is *Occidental*, and a *morning Star*, at the *beginning* of the *Year*, to the 21*st*. day of *January*; then *he* becomes an *evening Star* to the 4*th*. day of *March*; from thence *he* is again a *morning Star*, to the 12*th* day of *May*; then an *evening Star* again, to the 11*th*. day of *July*; then again a *morning Star*, to the 31*st*. day of *August*, from thence an *evening Star* again, to the 1*st* day of *November*; and from thence a *morning Star* again, to the end of the *Year*.

Cœli enarrant Gloriam Dei.

Notæ Vulgares:

O R,

Common Notes for this present year, 1690. according to both Accounts, viz.

Julian	and	*Gregorian*
19	The Golden Number.	19
19	Cycle of the Sun.	19
6	Dominical Letters.	
13	Roman Indiction.	13
29	Epact.	19
30	Number of Directions.	33

The Use of the Two ensuing Tide-Tables.

TO find the time of Full Sea or High Water in any of those places mentioned in the two ensuing Tide-Tables, you must observe, First, the Age of the Moon, which you may easily find in the next following Table, wherein you have the Moons Age every day throughout this Year, 1690. And having therein found out the Moons Age, according to those directions mentioned for that purpose, in the side of the said Table; then have recourse unto the said Tide-Table, and look for the place desired, in the Head of the said Tables, with the Age of the Moon, in the Column under the Title of the Moons Age, and in the common Angle or meeting of those Lines, in the Col. under your place, you shall have the time of High-Water in hours and minutes.

Yet Note, that the Tides do not always fall out exactly at the time found in these Tables, by Reason of the difference of the Moons Latitude, High Winds, Land Floods, &c. which very often alter the time, yet this is the exactest Rule that can generally be given for the finding of them.

A TABLE *of the Moons Age every day throughout this Year,* 1690. *whereby, with the help of the ensuing Tide-Tables, the time of High-Water and full Tide, may be found in those places there signified.*

Days	January	February	March	April	May	June	July	August	September	October	November	December

January's Planetary *Transactions*, and *Observations*, 1690.

The { 3 day at 11 at night *Jupiter*, 8 day at 9 at night *Mars*, 22 day at 3 afternoon *Saturn*, 28 day at 8 at night *Venus*, 30 day at 11 at night *Mercury*, 31 day at 9 at night *Jupiter*, } is with the *Moon*.

A Deo pendent omnia.

MAY the *Blessingt* of *God* attend us *now*, and all along through out this *Year*, 1690. — The *Heavenly Bodies* at the *beginning* of this *Month*, are in a pretty Calm, and serene Posture: But towards the *end thereof*, many *Configurations* appear, of a thwarting Nature, — There is now a *Conjunction* of the *Sun* and *Mercury*, in *Aquarius*, a *Quartile Aspect*, of *Mars* and *Mercury*; and of the *Sun* and *Mars*, in *Taurus*, and *Aquarius*, of *Saturn* and *Mercury*, and of the *Sun* and *Saturn* in *Scorpio*, and *Aquarius*; and an *Opposition* of *Saturn* and *Mars* in *Taurus*, and *Scorpio*, whose *Effects* may be of some Importance, in those parts of the World, that are under the aforesaid *Constellations*; and may operate very effectually, *&c.* — The *Opposition* of *Saturn* and *Mars*, has the *greatest Signification*; Its *Effects* may be of an uneasie Nature, *&c*, unto some places. —

Expect much *stormy*, *windy*, *cold*, *snowy*, *or unsettled Weather*, towards the *latter part* of this *Month*. —

First Quarter, the 6 day 52 minutes past 1 afternoon.
Full Moon, the 13 day 42 minutes past 8 morning.
Last Quarer, the 21 day 27 minutes past 2 morning.
New Moon, the 28 day 7 minutes past 11 at night.

The { 6 day at 5 in the morning *Mars*, 18 day at mid-night *Saturn*, 27 day at 6 in the morning *Venus*, 28 day at 3 Afternoon *Jupiter*. } is with the ☽

Si Deus nobiscum, quis contra nos.

THE *Stars* in this *Month*, are thus disposed, *viz.* *Saturn* becomes *Retrograde*, about the *middle* thereof, in, or about the 18*th*. Degree of *Scorpio*; and *Mercury* becomes *Retrograde*, in the 29*th*. Degree of *Pisces*, at the *end* thereof. *Mars* now passeth out of *Taurus*, into *Gemini*, and here is a *Conjunction* of *Jupiter* and *Mercury*, in ♊, of the *Sun*, and *Jupiter* in *Pisces*; a *Quartile Aspect* of *Saturn* and *Venus*, in *Scorpio*, and *Aquarius*, and of *Mars* and *Venus*, in *Taurus*, and *Aquarius*; and a *Trine Aspect* of *Saturn* and *Mercury*, and the *Sun* and *Saturn* in *Scorpio*, and *Pisces*: and an *Eclipse* of the *Sun*, on the *last day* of the *Month*, in the *Two and Twentieth Degree* of *Pisces*; but not to be seen of us, in *England*: To our *Antipodes* 'twill appear, *&c.* Sundry Rumours and Discourses may be abroad, about Martial Concernments, in diverse Countries. Naval Proceedings, and Materal Passages in some parts of *Europe*, both at Sea, and Land.

Wet Weather pretty often in this *Month*, yet *seasonable enough* for the time of the *Year*.

First Quarter, the 7 day 8 minutes past 8 at Night.
Full Moon, the 14 day 17 minutes past 10 at Night.
Last Quarter, the 22 day 49 minutes past 9 at Night.
New Moon, the 30 day 11 minutes past 10 before Noon.

} in with the

Pax est Dulcissima rerum.

A Type of the Moon's Eclipse in this Month.

ON the 14*th.* day of this *Month*, there will be an *Eclipse* of the *Moon*, in the 5*th.* degree of *Libra*; which (if the Air Favours,) may be seen here in *England*.

It's *beginning*, will be about 55 min. past 8 of the Clock at *Night*; Its *middle*, or *greatest Observation*, about 17. min. past 10; and the *end thereof*, will be about 38 min. past 11 of the Clock at *Night*. The *Total Duration* will be 2 hours, and 43 min. and the *digits Eclipsed* 5 and 33 minutes.

In this *Month*, there is a *Conjunction* of the *Sun* and *Mercury*, *Jupiter* and *Venus*, *Venus* and *Mercury*, and *Jupiter* and *Mercury*, in *Pisces*: a *Quartile* of *Mars* and *Mercury*, and *Jupiter* and *Mars*, in *Gemini*, and *Pisces*; a *Trine* of *Saturn* and *Venus*, *Saturn* and *Jupiter*, and of *Saturn* and *Mercury* in *Scorpio*, and *Pisces*. Many considerable *Matters* seem now to be in *Agitation*, in many parts of the World.

More *wet weather* in this *Month*, than *dry*, &c.

First Quarer, the 6 day 5 min. past 2 Morning.
New Moon, the 28 day, 2 min. past 7 at Night.
Last Quarter the 21 day, 10 min past 3 Afternoon.
Full Moon, the 13 day 29 minues past Noon.

The { 3 day at 10 at night *Mars*, / 14 day at 11 before noon *Saturn*, / 25 day at 6 morning *Jupiter*, / 27 day at 4 afternoon *Mercury*, / 29 day at 5 morning *Venus*, } is with the *Moon*.

Dubius rerum eventus.

AEOL, makes the *Quadrate Aspect* of *Jupiter* and *Mars*, mentioned by me in the *Month* last past, to be on the *Second Day* of this *Month*, about 6 of the Clock in the Morning, but by more *correct Tables* 'twas on the 30*th*. day of *March* past, which made me mention it, amongst the other *Aspects*, in that *Month*, accordingly. —— The *Heavenly Bodies* now, are in a pretty moderate Condition: *Mars* now leaves *Gemini*, and comes into *Cancer*, and the *Aspects* of the *Stars* in this *Month* are these, *viz.* a *Sextile* of *Venus* and *Mars*, and of the *Sun* and *Mars*, in *Aries*, and *Gemini*; a *Conjunction* of the *Sun* and *Venus*, in *Aries*; and an *Opposition* of *Saturn* and *Venus*, and of the *Sun* and *Saturn*, in *Taurus*, and *Scorpio*. These two *Oppositions*, are of the most Importance; especially, that of the *Sun* and *Saturn*, both as unto the weather, and other Significations. Some Inconveniences, or Difficulties of its Nature, may appear in some Countries beyond the Seas, *&c.*

The *Weather*, will be somewhat uncertain, in this *Month*; towards the *latter end thereof*, many *cold*, and *hasty storms* of *Hail*, and *Rain*, &c. with *Thunder*, will happen in many *places*.

First Quarter, the 5 day 3 minutes past 9 morning.
Full Moon the 13 day 22 minutes past 2 morning.
Last Quarter, the 21 day 56 minutes past 5 morning.
New Moon, the 28 day 34 minutes past 2 morning.

The { 2 day at 9 in the Morning *Mars*
14 day at 2 afternoon *Saturn*
23 day at 2 Morning *Jupiter*
28 day at Midnight *Venus*
29 day at 9 Morning *Mercury* } is with the Moon.

Belli exitus incertus.

IN this *Month* the *Stars* are variously disposed, and seem to have diverse Significations: *Jupiter* now leaves *Pisces*, and comes into *Aries*; and here is a *Conjunction* of the *Sun* and *Mercury*, and of *Venus* and *Mercury*, in *Gemini*: A *Sextile Aspect* of *Mars* and *Mercury*, in *Taurus* and *Cancer*; of *Jupiter* and *Venus*, the *Sun* and *Jupiter*, and *Jupiter* and *Mercury*, in *Aries* and *Gemini*: A *Trine* of *Saturn* and *Mars*, in *Cancer* and *Scorpio*: An Opposition of *Saturn* and *Mercury*, in *Taurus* and *Scorpio*: And a *Quartile* of *Jupiter* and *Mercury*, in *Aries* and *Cancer*. Some of these *Configurations* are of a *mild* and *serene Constitution*, and (perhaps) their *Effects* may prove accordingly; and many Things portended by them at this time, may appear in the World of a pretty acceptable temper, though variety of Action seems near Manifestation in sundry parts thereof.———

Unsetled Weather very *often in this Month*, and many *cold Showers* of *Hail*, *Rain*, &c. therein.

First Quarter, the 3 day, 33 minutes past 6 at Night.
Full Moon, the 11 day, 16 minutes past 4 afternoon.
Last Quarter, the 19 day, 46 minutes past 5 afternoon.
New Moon, the 26 day, 24 minutes past 9 morning.

The { 4 day at 10 at Night *Saturn* / 16 day at 11 at Night *Jupiter* / 24 day at 11 beforenoon *Mercury* / 27 day at 5 in the morning *Mars* / 27 day at 7 at Night *Venus* } is with the Moon.

Discordiâ dilabuntur regna.

Saturn now becomes *direct* in *Motion*, in the 11*th* degree of *Scorpio*, and *Jupiter* becomes *Retrograde* in the 7*th*. degree of *Aries*; and *Mars* in this *Month* goes out of *Leo* into *Virgo*.—— The *Month* begins with a *Quartile Aspect* of *Saturn* and *Venus*, in *Leo* and *Scorpio*: And there is now a *Conjunction* of the *Sun* and *Mercury*, in *Cancer*; and of *Mars* and *Venus*, in *Leo*: A *Trine Aspect* of the *Sun* and *Jupiter*, in *Aries* and *Leo*: A *Quartile* of the *Sun* and *Saturn*, in *Leo* and *Scorpio*: And a *Sextile Aspect* of *Saturn* and *Venus*, in *Virgo* and *Scorpio*. These *Configurations* have no very material Significations, the *Quartile* of the *Sun* and *Saturn* seems to be of the most importance; however, the *Effects* of the late *Quadrature* of *Saturn* and *Mars*, in the other *Month* past, *viz. June*, may operate at this time, in one kind or other, in some parts of the World, under *Leo* and *Scorpio*; and if they prove of a serene and propitious Nature, 'twill be well.—— The publick concerns of some Nations seem not very easie.

Seasonable Weather in this *Month*, yet sometimes *hasty Storms*, with *Thunder*, may be expected.

First Quarter, the 1 day, 21 minutes past 9 in the Morning.
Full Moon, the 9 day, 48 minutes past 11 at Night.
Last Quarter, the 17 day, 35 minutes past 9 in the forenoon.
New Moon, the 24 day, 24 minutes past 1 in the Morning.
First Quarter, the 31 day, 26 minutes past 2 in the afternoon.

The { 1 day at 9 in the Morning *Saturn*
4 day at 3 afternoon *Jupiter*
23 day at 10 at Night *Mercury*
24 day 11 at Night *Mars*
26 day at 4 afternoon *Venus*
28 day at 6 at Night *Saturn* } 's with the Moon.

Da pacem Domine.

THere will be an *Eclipse* of the *Sun* on the 24th. day of this *Month*, about one of the Clock in the Morning, in the 11th. degree of *Virgo*, 'twill be *invisible*, as to us; but 'twill be a pretty great *Eclipse* where 'tis *visible*, which will be in the remote parts of the World, for the *Sun's Body* will be darkened to the quantity of 8 *digits*.

In this *Month* of *August* the *Stars* appear in an indifferent serene posture; nor are there any *Aspects* of any great Consequence now. Here is a *Trine* of *Jupiter* and *Mercury*, in *Aries* and *Leo*: A *Sextile* of *Saturn* and *Mars*, in *Virgo* and *Scorpio*: A *Quartile* of *Saturn* and *Mercury*, in *Leo* and *Scorpio*: An *Opposition* of *Jupiter* and *Venus*, in *Aries* and *Libra*: A *Conjunction* of the *Sun* and *Mercury*, in *Virgo*: A *Sextile* of the *Sun* and *Saturn*, and of *Saturn* and *Mercury*, in *Virgo* and *Scorpio*. The *Heavenly Bodies* (now) being for the most part of a moderate disposition, their *Effects* may be accordingly; and so may the *Mundane Negotiations* of this *Month*, notwithstanding many *various Reports* and *Transactions*, &c.

Good Weather for the *most part of this Month*; though *now and then* some *Storms* and *High Winds* may happen therein.

Full Moon, the 8 day, 45 min. past 1 afternoon.
Last Quarter, the 15 day, 11 min. past 3 afternoon.
New Moon, the 22 day, 35 minutes past Noon.
First Quarter, the 30 day, 15 min. past 9 in the Morning.

——*sed regit Astra Deus.*

THis *Month* affords many *Configurations* of the *Stars* of several *Kinds* and *Natures*: And there is at this time more *Conjunctions* of the *Planets*, than in any other *Month* in this *Year*, there being now no less than six, and some of them very considerable too; for there is now a *Conjunction* of the *Sun* and *Mercury*, of the *Sun* and *Saturn*, of *Saturn* and *Mars*, of *Saturn* and *Mercury*, and two *Conjunctions* of *Mars* and *Mercury*, and all in the *Celestial* Sign *Scorpio*. Here is also a *Trine Aspect* of the *Sun* and *Jupiter*, *Jupiter* and *Mars*, and *Jupiter* and *Mercury*, in *Scorpio* and *Pisces*: A *Sextile Aspect* of *Mars* and *Venus*, and *Saturn* and *Venus*, in *Scorpio* and *Capricorn*; of *Jupiter* and *Venus*, in *Capricorn* and *Pisces*; and two *Sextile Aspects* of *Venus* and *Mercury*, the one in *Scorpio* and *Capricorn*, and the other in *Sagitary* and *Aquarius*. The aforesaid *Conjunctions* are of the most Consequence, and seem to have the *greatest portents*, especially that of *Saturn* and *Mars*. Sea Affairs, and sundry other Matters, seem now much under Consideration. Martial Transactions, Inundations, *&c.* in some places, may be feared.——

Very great Floods, cold *Weather*, much *Snow*, or *Rain* in this *Month*.——

December

Full Moon, the 6 day, 14 minutes past 1 morning.
Last Quarter, the 12 day, 28 minutes past 4 afternoon.
New Moon, the 20 day, 45 minutes past 2 afternoon.
First Quarter, the 28 day 8 minutes past 5 at night.

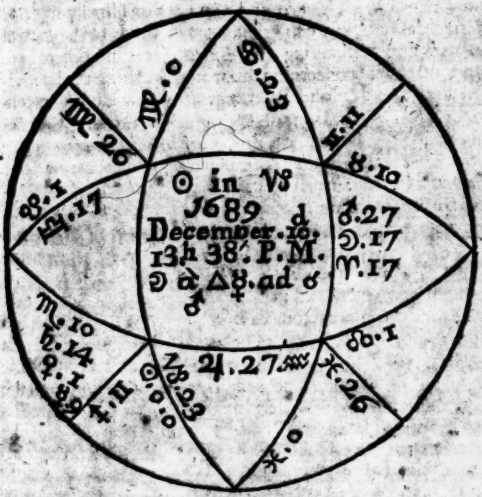
Astral Observations, &c.

For the Year 1690.

By William Andrews, Student in *Astrology*.

Quum respicio Cœlos tuos, opus digitorum tuorum, Lunam & Stellas quas statuisti: quid est mortalis, quod memor sis ejus? aut filius hominis, quod visites eum? Psal. 8. 4, 5.



Of the Ingress *of the* Sun *into* Capricorn, *in* Decem. 1689.

UPon *Wednesday* the 11*th*. of *December*, 1689. about 38 Minutes after *one* of the *Clock* in the *Morning*, the *Sun* enters the *Celestial* Sign *Capricorn* (or the Earth *Cancer*

according to the *Copernicans*) at which time, the *Winter* Quarter *Astronomically* begins; the Sun being at his farthest distance *Southward*: Or the Earth by its circumrotation having volved it self to the greatest *Northern* Inclination, whereby we being furthest deflected from the *Sun*'s Rays, receive least Light, making the shortest day and longest Night, to all *Northern Inhabitants* on this side of the *Æquinoctial Line*, and the longest day and shortest Night, to all *Southern People* beyond the said Line.

This Ingress of the *Sun*, is one of the *Cardinal Ingresses* of the four to be *Yearly considered*, as in relation to the then *State* and *Position* of the *Heavens*: The other three are the *Sun*'s *Ingresses* into *Aries*, *Cancer* and *Libra*: For I shall now (*God assisting*) as heretofore in other *Years*, adhere to the *Rules* of *Ptolomy*, notwithstanding what *Haly*, *Ignatus* and others have wrote otherwise concerning this matter, relating to the *Revolutions* of the *Year* and *Solar Ingresses*. Annually to be considered. The *Doctrine* of *Ptolomy*, lib. 2. cap. 9. *Quadri.* concerning the Business, is this, *viz. Mihi conveniens & naturalius esse videtur, ad judicandos eventus annuos, quatuor assumere principia: observatis iis quæ proximè præcesserint, Novilunii Solis & Lunæ, ac plenilunii, & maximè eis quibus horum alternum Luminarium defuerit; atque ita judicium facere de statu veris ex principio Arietis, de Æstate à Cancro, de Autumno à Libra, de Hyeme à Capricorno.* It seems to me most convenient and necessary in the Judgment of *Annual Events*, to assume four beginnings, regard being had to the *New* and *Full Moons*, next preventional, especially, if thereat, either of the Luminaries be *eclipsed*; and so to give Judgment of the state and condition of the *Spring* from the beginning of *Aries*, of the *Summer* from *Cancer*, of the *Autumn* from *Libra*, of the *Winter* from *Capricorn*. And he proceeds to give the reason thereof, in these Words, *Nam ipsas quidem universales constitutiones temporum & modos, Sol parit: unde, & penitus imperiti Mathematum prædicunt futura.* For these general Constitutions, and their manners are caused by the *Sun*; whence even many unskilful in Art, do come to the knowledge of Future Events. Thus far the learned *Ptolomy*.

At

At the aforesaid time of the *Ingress* of the *Sun* into *Capricorn*, the *Heavenly Bodies* are posited as the foregoing Scheme demonstrates, *viz.* The seventeenth Degree of *Libra* ascends in our *Horizon*, and the three and Twentieth Degree of *Cancer* is on the *Cusps* of the *Medium Cœli*, both moveable Signs, the one being of the *Airy Triplicity*, and the other of the *Watry*. *Saturn* is in the fourteenth Degree of *Scorpio* in the *second House*. *Jupiter* in the seven and Twentieth Degree of *Aquarius* in the *fourth House*. *Mars* is in the seven and Twentieth Degree of *Aries*, and the *Moon* in the fifteenth Degree thereof, both in the *seventh House*. The *Sun* is in the *third House*, *Venus* is in the *first* and *Mercury* in the *ninth* Degree of *Sagittary*, the one, *viz. Venus*, being in the *second House*, and *Mercury* is in the *third*. *Caput Draconis* is in the *sixth House* in the first Degree of *Aries*, and *Cauda* is in the *twelfth House* in the first Degree of *Libra*. All the Planets are under the Earth at this *Ingress*, but only *Mars* and the *Moon*, and they are very near their setting. The *Moon* is lately separated from a *Trine Aspect* of *Mercury*, and is hastning to the *Conjunction* of *Mars* and *Jupiter*. *Mars* and the *Moon* are in *Angles*, *Saturn* and *Venus* in a *succedent House*, and *Mercury* and the *Sun* are in a *cadent*.

As unto the *Mutual Aspects* of the *Planets*, at this aforesaid *Ingress*, they are not considerable: there is only *Mars* applying to the *Sextile Aspect* of *Jupiter*, which *Aspect* is of a favourable signification. Just before the said *Ingress*, there was a *Trine Aspect* of the *Sun* and *Mars*, a *Quartile* of *Jupiter* and *Venus*, and of the *Sun* and *Jupiter*.

What is most to be observed concerning the Posture of the *Heavens*, at this said *Ingress* of the *Sun* into *Capricorn*, is the position of *Mars* and the *Moon* in *Aries*, in the *seventh House* (*Mars* being strong and well fortified therein) and the *Moon*'s applying to a *Conjunction* with him. *Haly* in his 8th. Book, page 331 *De judiciis Astrorum*, writes thus—— *Quando Mars fuerit in septima, significat inimicitias & discordias magnas, & accidunt hominibus furta, interfectiones, & contentiones multæ & rixæ*, &c. And he further affirms, in page 304 of his said Book: That if there shall be a *Conjunction* of *Mars* and the *Moon*, at any Revolution of the *Sun*,

of *Solar Ingress*, *significat rumores falsos*, *& sanguinum effusiones*, *& mendacia multa*, &c. And these significations will (probably) be most manifested (as he saith) in those Places of the World under the *Constellation*, wherein the said *Planets* are posited. Besides, in the Month of *January*, this present Year, 1690. there is an *Opposition* of *Saturn* and *Mars*, in *Taurus* and *Scorpio*, two fixed Signs, whose *Effects* may be considerable (as I have hinted in my *Observations* on that *Month*) Robberies, Pyracies, rash and unruly Actions, with Inconveniences and Difficulties may attend some *European* Countries in the Months of *January* and *February*, or the beginning of *March*, in this Year both at Sea and Land, occasioned by War and its Attendants, if not some diseases of an infectious Nature, and many various and uncertain reports may be then abroad —— And so I come to the position of *Heaven* at the *Ingress* of the *Sun* into *Aries*, in this Year, being the second, and next *Solar Ingress* in order to be herein considered. The Scheme whereof doth hereafter follow ——

Of the Ingress *of the* Sun *into* Aries, *in* March, 1690.

THE *Sun* comes into *Aries*, (or the *Earth* into *Libra*, as some apprehend) on *Sunday* the 9th. day of *March* this present Year, about *Midnight*, at which time the *Spring Quarter Astronomically* begins, the *Days* and *Nights* being then of equal length all the World over; and the *Sun* in his *Middle Ascent*, in respect of the Tropicks, as being neither too remote from, nor yet too near our *Vertex*: And as always the *Winter Quarter* (according to *Astronomical Account*) continues, during the Sun's Progress through *Capricorn*, *Aquarius*, and *Pisces*; so the *Spring* Quarter (according to the same Account) continues, during the *Sun*'s abode in *Aries*, *Taurus*, and *Gemini*.

The *Heavenly Bodies*, at this *Ingress* of the *Sun* into *Aries*, are thus posited, *viz.* The third Degree of *Sagittary* ascends in our *Horizon*, and the very beginning of *Libra* is on the *Cusps* of the *Medium Cœli*, the one being a common Sign, *viz.* *Sagittary*, the other a moveable one. The four *Angles* are partly moveable, and partly common. *Saturn* is in the

seventeenth

ven ... teenth Degree of *Scorpio*, *Retrograde*, in the *twelfth House*. *Venus* is in the twentieth Degree, *Mercury* in the three and twentieth Degree, *Caput Draconis* in the six and

their *essential Dignities*, being *peregrine*, or otherwise debilitated, *&c.* And none of them in any potent Condition but *Mars*; and now at this present *Ingress*, they are almost in the same Condition, there being none of them in material *essential Dignities*, but *Jupiter* and the *Moon*, and they are in their own *Houses*, but in abject places of *Heaven*, and there are none of the Planets above the *Earth* at this said *Ingress*, but the *Moon* and *Saturn*: For *Mars* is near unto his setting, and wants but a little thereof. He has no *essential Dignities*, in the Place wherein now he is. *Mercury* is in his *Fall* and *Detriment*. *Venus* is *peregrine*, and so is *Saturn* ——

The *Configurations* attending this said *Vernal Ingress*, most to be considered, are, a *Trine of the two superiour Planets Saturn* and *Jupiter*. Two or three days, *&c.* before the said *Ingress*, there was a *Conjunction* of the *Sun* and *Mercury*, of *Jupiter* and *Venus*, and of *Venus* and *Mercury* in *Pisces*. A *Trine* of *Saturn* and *Venus* in *Scorpio* and *Pisces*. And two or three days after the said *Ingress*, *Mercury* comes to the Conjunction of *Jupiter* in *Pisces*: all which may have some considerable Signification, and their *Effects*, may appear in one kind or other, as in relation to the *Weather*, and otherwise, at the beginning of the *Spring Quarter*. The *Trine* of *Saturn* and *Jupiter*, is by *Astrologers* accounted to be of a serene and calm Disposition, and [illegible] Actions and Things accordingly; and that many People will be labouring for Peace (and much desire it) and many Matters relating thereunto will be carried on, and many Endeavours will be on foot, for the reconciling of National Differences, which if it take Effect, 'twill be well ——

What is most to be disliked at this said *Ingress* of the *Sun* into *Aries*, is the *Position* of the Planet *Mars* in the *seventh House*, in *Gemini* a humane *Sign*. At the aforesaid *Ingress* of the *Sun* into *Capricorn*, he was in *Aries*, in the *seventh House*, and now he is posited therein also, at this *Vernal Ingress*, though in another *Sign* —— So that *His* signification now seems to be much of the same Nature that was beforementioned, at that aforesaid *Ingress*; and he doth seem to import considerable Martial Actions, in sundry places of *Europe* in this *Spring Quarter* —— And many things tending thereunto,

unto, and that in some Places the Soldier will be very Active, and many Military Undertakings and Negotiations may happen in several Parts of the World, in the *Months* of *March*, *April*, and *May*, in this present *Year*——

I do proceed, and say, that seeing that *Mars*, both at the aforesaid *Ingress* of the *Sun* into *Capricorn*, as also at this his said *Ingress* into *Aries*, is in *Opposition* to the *Ascendant*, his Influence seems to concern that part of *Heaven* also, at both these said *Ingresses*, as well as the *seventh House*, wherein he is posited, and he doth seem to have an unease signification, as in relation thereunto, and things by it signified, so that it may be feared, that in this *Spring Time* of this *Year*, many Diseases of a hot and dry Nature, as *Violent Fevers*, *Small Pox*, or *Pestilential Diseases*, may afflict some People in some Places: for the *Moon*'s Position in the *eighth House*, (which is called by *Astrologers Domus Mortis*) is of no pleasant Nature, at this time neither, but doth seem to import the Death of many by sundry Diseases, *&c.* in some *European Countries*, which *God* prevent.

All the *Planets* are at this *Vernal Ingress*, in moist and watry *Signs*, but only *Mars*: *Ergo*, their *Effects* may be much manifested at Sea, and in places near thereto, in Low, Fenny, Moist, and Watry Places—— And Naval Proceedings may appear in the *Spring Quarter* of this *Year*, or the setting out and imploying of many Ships at Sea, in some parts of the *World*, or much business relating unto *Maritime* Concernments or *Navigation*: and seeing that *Saturn* is in the *twelfth House*, *Retrograde*, at this *Ingress* of the *Sun* into *Aries*, he seems to import some Inconveniences to *Husbandmen*, *Farmers*, *&c.* and Persons signified by him, either by bad Weather, loss of their greater sort of Cattel, or otherwise, *&c.*——

As unto the Weather in this *Spring Quartir* of this *Year*, it seems to me, that it will be probably more wet than dry, and that there will many Showers of *Rain*, and much unsetled *Weather* often therein, in divers places: and many cold *Storms* of *Hail* and *Rain*, (if not *Snow* in some Places) especially about the latter end of *April*, and beginning of *May*——

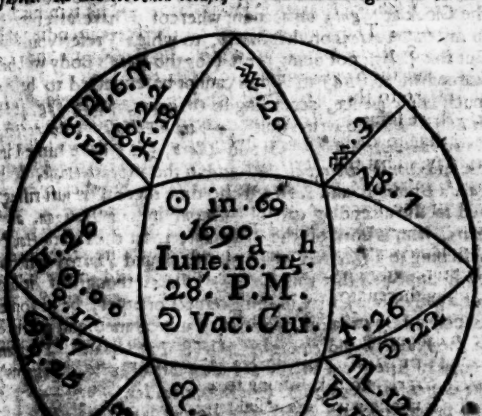
Quickly after this *Vernal Equinoctial Ingress*, there will happen an *Eclipse* of the *Moon*, visible to us in *England*, viz. on the fourteenth day of *March* this Year about ten of the Clock at *Night*; an account whereof I have given you, in my *Observations* on that *Month*, to which I refer you —— But this *Eclipse* not being great (for the *Moon's* Body will be scarce half *eclipsed*) its *Effects* cannot be expected to be of much consequence, according to *Origanus*, *par.* 3. *pag.* 462. *de Effectibus*, who writes thus ——*parvæ Eclipses parum nocent, & in paucis perantur* —— It's in *Libra*, (as I have hinted in the said *Month's Observations*) and in the *eleventh House*, near *Cauda Draconis*, and *Saturn* at the time thereof is just rising, and in the ascending part of *Heaven*, in our *Horizon*, and *Mars*, who is Lord of the *Ascendant*, is in the *eighth House*, hastening to a *Quartile Aspect* of *Mercury* and *Jupiter*, whereby it appears, that this *Eclipse's Effects* (though of it self but a *partial* one) may in some respect or other, be of some importance by reason of the then appearance and posture of the *Planets*, and *Heavenly Bodies*. *Proclus* saith, That an *Eclipse* of the *Moon* in the *first decanate* of *Libra*, (as this) ——*Significat Grandines, & fœdas alias tempestates* —— and so I proceed to the *Position* of *Heaven* at the *Sun's Entrance* into *Cancer* this Year, being the *third* and next thing in order to be herein observed ——

Of the Ingress *of the* Sun *into* Cancer, *in* June *this Year*, 1690.

ON *Wednesday* the eleventh day of *June*, this present *Year*, 1690. at 28. minutes past *three* of the Clock in the *Morning*, the *Sun* enters *Cancer*, and makes his furthest perambulation *Northward*, or the Earth *Capricorn*, and is at its furthest limit of *Southern Inclination*, making the *longest Day* and *shortest Night*, amongst us, and now the *Summer Quarter* (*Astronomically*) begins, and continues as long as the *Sun* is running through *Cancer*, *Leo*, and *Virgo* ——

At this *Ingress* of the *Sun* into *Cancer*, the six and twentieth Degree of *Gemini ascends*, and the twentieth Degree of *Aquarius*, is on the *Medium Cœli*, the one a common *Sign*, viz. *Gemini*, the other a fixed *Sign*, they are both of the *airy Triplicity*: *Mercury* is Lord of the *Ascendant*, and *Saturn* of

of the *Medium Cœli*, or the *tenth House*. *Saturn* is in the *fifth House*, *Retrograde*, in the eleventh Degree of *Scorpio*. *Jupiter* in the *eleventh House*, in the sixth Degree of *Aries*:



Mars is in the *third House*, in the sixth Degree of *Leo*: the *Sun* is in the *Ascendant*: *Venus* is in the seventeenth Degree of *Pisces*, and *Mercury* in the five and twentieth Degree thereof, both in the *second House*. The *Moon* is in the *seventh House*, in the two and twentieth Degree of *Sagittary*, void of *Course*. *Caput Draconis* is in the *eleventh House*, in the twelfth Degree of *Pisces*, and *Cauda Draconis* is in the *fifth House*, in the same Degree of *Virgo*. All the *Planets* are under the *Earth*, but *Jupiter* and the *Sun*; and none of them in *Angles* but the *Sun* and *Moon*: For the *Moon* want but four Degrees of the *Cusps* of the *seventh House*, *Jupiter*, *Venus*, and *Mercury* are in *succedent Houses*, and *Saturn* and *Mars* in *cadent* ones —— The

The Planets now at this *Ingress* too, as well as at the two former *Ingresses*, beforementioned, are but in a very mean and indifferent Posture. None of them being in any considerable *Essential Dignities*, but *Jupiter*, and he is in his *Triplicity* —— The *Configurations* of the *Stars* attending this *Summer Solstitial Ingress*, are a *Trine Aspect* of *Mars* and *Jupiter*, and the *Sun* is applying to a *Quartile Aspect* of *Jupiter*, and *Mars* to the like *Aspect* of *Saturn*; and these *Aspects* may have some *Effects* in the *Summer Quarter* of this *Year*, according to their *Natures* and *Dispositions* —— *Astrologers* say, That the *Sextile* and *Trine Aspects* of the Planets are of *Amicable* and *Serene Significations*; but the *Significations* of the *Quadrate* and *Opposite Aspects*, are of another Temper —— *Ergo*, this said *Trine Aspect* of *Jupiter* and *Mars* at this *Revolution* of the *Sun*, seems to signifie, that many Overtures of Peace, *&c.* will appear, and many things reading thereunto, will fall under consideration in this *Summer Quarter* of 1690. in some Places, who have heretofore been labouring under War, *&c.* —— But notwithstanding seeing that *Mars* is now in *Leo*, as aforesaid, a *Hot* and *Choleick Sign*, and is hastening to a *Quadrate Aspect* of *Saturn*, (who is not now well disposed) this seems to have some signification of sturdy Actions, and many things of *Martial* Concernments in the World, as *Fights*, *Battels*, *Murthers*, and also *Robberies*, *Thefts*, *Piracies*, and sundry other *Enormities*, &c. —— in the Months of *June*, *July*, and *August*, this present *Year*, and other *Inconveniencies* and *Difficulties*, are further signified at this time by *Mars* in the third *House* —— *Haly* saith pag. 371 *de judiciis Astrorum* —— *Quando Mars fuerit in Tertia*, —— *non associabitur unus alteri, & erunt invidia & inimicitiæ inter eos* —— However the *Position* of *Jupiter* in the *eleventh House*, seems to import, that many Treaties, *&c.* will be carried on in some Places, for disposing People to an amicable Temper ——

Three of the *Planets* are at this *Ingress* in *fiery Signs*, viz. *Jupiter*, *Mars*, and the *Moon*, *Saturn*, the *Sun*, *Venus*, and *Mercury*, are in *Watry Constellations*, so that their *Effects* may operate both at Sea and Land, in divers Parts of the World, and that in several Respects, *&c.* ——

Towards

Towards the end of this *Summer Quarter*, *viz.* on the three and twentieth day of *August* this *Year*, there will happen a considerable *Eclipse* of the *Sun* about one of the *Clock* in the *Morning*, two third parts of the *Sun's* Body will be *eclipsed*, it happens in the eleventh Degree of *Virgo*, (as I said in my Observations on that *Month*) But 'twill not be *visible* in these parts of the World, but in very remote Countries, and therefore I shall not much enlarge upon it here, though it may have *Effects*, answerable to its *Magnitude* —— *Leovitius* a great *Astrologer* of former times hath given judgment upon *Eclipses* when *Subterraneus*, and they may or ought to be considered (in my opinion too) as unto the *Sign Eclipsed*, and *Position* of *Heaven*, &c. at the time when they happen, because they may have *Effects* that may appear in many Places where the *Eclipse* it self is not visible. Though *Origanus* saith pag. 163 *de Eclipsibus* —— *Nil nocet illis Regionibus, in quibus non videtur.*

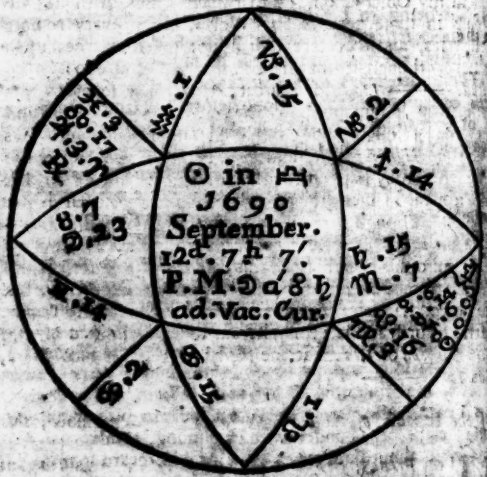
As unto the Weather, in this said *Summer Quarter* in this *Year*, 1690. *Thunder* and *Lightning*, and *Hasty Showrs*, &c. may often happen therein in divers Places. And so I come to the Fourth and last thing herein to be considered of, *viz.* The *Position* of *Heaven* at the *Ingress* of the *Sun* into *Libra*, this *Year* ——

Of the Ingress of the Sun into Libra, in September, this Year, 1690.

UPon *Friday*, the *twelfth day of September*, this *Year*, at *seven Minutes* past *seven* of the *Clock* at *Night*; the Sun comes into *Libra* (or the *Earth* into *Aries*) The *Sun* (according to common Opinion) at this time crossing the World's *Axis*, with a right Angle, maketh an equal Course in every *Horizon*, throughout both *Hemispheres*. Or the *Earth's Axis* (according to some) being paralell'd to the *Sun's*, causeth it again to move in its *Diurnal Revolution*, directly to the *Sun's* Superficies, and so consequently either way, maketh the *Day* and *Night* of *equal Length*, all the *World* over. The *Autumnal Quarter* (*Astronomically*) now begins, and continues till the *Sun* hath made his *progress* through *Libra*, *Scorpio*, and *Sagittary* ——

At

At this *Autumnal Solar Ingress*, the seventh Degree of *Taurus ascends*, and the fifteenth Degree of *Capricorn* is on the *Cusps* of the *tenth House*. *Taurus* is a fixed *Sign*, and *Capricorn*



a moveable, both of the *Earthly Trigon*. *Venus* is ruler of the *Ascendant*, and *Saturn* of the *tenth House*, he is now in the fifteenth Degree of *Scorpio*, and *Venus* in the sixth, both in the *seventh House*. *Jupiter* is in the third Degree of *Aries*, *Retrograde*, and *Caput Draconis* is in the seventeenth Degree, both in the *twelfth House*. *Mars*, the *Sun*, *Mercury*, and *Cauda Draconis*, are all in the *sixth House*. *Mars* being in the sixth Degree, and *Mercury* in the fourteenth Degree of *Libra*. *Cauda Draconis* is in the seventeenth Degree of *Virgo*, and the *Moon* is in the *Ascendant*, in the three and twentieth

deth Degree of *Taurus*, and is separating from an *Opposition* of *Saturn*, and is void of Course —— *Saturn*, *Jupiter*, and the *Moon*, are above the *Earth*, all the rest of the *Planets*, are under it. *Saturn*, *Venus*, and the *Moon*, are in *Angles*, but all the other *Planets* are in *cadent Houses*.

As unto their *Essential Dignities*, the *Moon* is now best fortified, she being in her *Exaltation*. *Jupiter* and *Mercury* are in their *Triplicities*: *Saturn* and *Venus Peregrine*, or in places tending thereto, and *Mars* in his fall ——

There are many *Configurations* of the *Planets*, at this *Ingress* of *Importance*. Not long before the same, there is a ☌ of ♂ and ☿; an ☍ of ♈ and ☿, and of ♑ and ♂, and quickly after the said *Ingress*, the *Sun* comes to the *Opposition* of *Jupiter*; *Venus* to the *Conjunction* of *Saturn*; and the *Sun* to the *Conjunction* of *Mars*. These *Oppositions* and *Conjunctions* of the *Stars* at this time, seem to import many Contingencies and *Mundane* Businesses of an active Nature, *&c.* —— And seeing all of them (but the said *Conjunction* of *Saturn* and *Venus*) happen in *Cardinal* and *Equinoctial signs*. They seem to be of the greater concernment as touching humane Negotiations, and Matters by them signified —— These *Configurations* of the *Heavenly Bodies* seem to portend various Actions and proceedings in sundry parts of the World, in the Months of *September*, *October*, and *November*, this Year. Also very great Winds in many places, sudden Fires, claps of Thunder with Lightning, Prodigies in the Air, *&c.* about those times —— And in regard so many of the *Planets* are in the *sixth House*, and *Saturn* in *Opposition* to the *Ascendant*, at this *Revolution*, (as aforesaid) there seems thereby signified, that many Diseases, as Feavers of several kinds; or Diseases of infectious and pestilential Natures will afflict some People in *Europe*, in the *Autumnal Quarter* of this Year, also ——

In the Month of *November* this Year, there will happen a *Conjunction* of *Saturn* and *Mars* in *Scorpio*, and also several other considerable *Conjunctions* of the other Planets therein (as I have particularly mentioned in that Month's *Observations*) whose *Effects* may

may be manifested about the end of this Year, or at the beginning of the next, 1691. *&c.* —— They seem to signifie much wet and moist Weather, and abundance of Rain at those times, great Floods, Inundations, or Overflowings of the Sea Banks in some Places, many Mischiefs thereby, and other Casualties by Sea and Land, which God avert—— The *Planets* have not been thus *conjoyned* in the sign *Scorpio* since the latter end of *October*, in the Year, 1660. And then they were nearly disposed, as now ——

I draw near unto Conclusion and say, That Mr *Lilly*, an eminent *Astrologer*, heretofore of this Nation, hath left in Print, Considerable *Predictions*, and *Astrological Judgments* relating to some *Years* yet to come —— and amongst other things he hath thus wrote —— *Many believe the last Age of the World is at hand, We verily conjecture that a troublesome and vexatious Time is approaching upon most Nations in Europe, &c. Thus he*—— You may see more of this, in his *Merlini Anglici Ephemeris*, for the *Year*, 1677. Many other things he hath there mentioned and *Predicted*, which seem now fulfilling —— *He* hath there also hinted much of the *Year*, 1699. —— And Mr. *Vincent Wing*, a late famous *Mathematician* of this Nation, has in his *Almanack* for the Year, 1669. (now Twenty Years ago) hinted at the *Year*, 1692. to be a *Year* of concernment to the *World* —— His Words are these, *Viz. About the Year*, 1692. *or a little before* 1700. *many expell great Alterations and Changes in the World, if not the dissolution of this earthly Fabrick. The Lord fit us to embrace his Mercy, and patiently to wait for his 2d coming, Amen. Thus he*—— I shall end this with the Words of our *Blessed Lord* and *Saviour Jesus Christ*, in St. *Matthew's* Gospel, *Chap.* 24. from *V.* 6. *V.* 14 —— *And ye shall hear of Wars and Rumours of Wars*, &c.

Prognosticks of Pestilential and Unwholsome Years: collected from Learned Authors.

IT is observed by the Learned, that those Years are pestilencial and unwholesome, when there are great Numbers of Frogs, Flies, Locusts, *&c.* The Cause is plain, for that those Creatures being ingendred of Putrefaction, when they abound,

abound, shew a general Disposition of the Year, and Constitution of the Air to Diseases of Putrefaction. And the same Prognostick holds if you find VVorms in Oak Apples, for the Constitution of the Air appeareth more subtilly in these things, than to the Sense of Man.

Great and early Heats in the Spring (and namely in *May*) without *winds* portend pestilent Years, and generally so do Years with little VVinds or Thunder.

Great Droughts in Summer, continuing till towards the end of *August*, and some gentle Showers upon them, and then some dry VVeather again, do portend a Pestilent Summer the Year following: for about the end of *August*, all the sweetness of the Earth, which goeth into Plants and Trees is exhaled, (and much more if the *August* be dry) so that then nothing can breath forth of the Earth, but a gross Vapour, which is apt to corrupt the Air, and that Vapour by the first showers if they be gentle, is released, and cometh forth abundantly. Therefore they that come abroad soon after those Showers, are commonly taken with Sickness. And in *Africk* no Body will stir out of doors after the first Showers. But if the Showers come vehemently, then they rather wash, and fill the Earth, than give it leave to breath forth pleasantly. But if dry weather come again, then it fixeth and continueth the Corruption of the Air upon the first Showers begun, and maketh it of ill Influence, even to the next Summer, except a very frosty *Winter* discharge it, which seldom succeedeth such Drought.

The lesser Infection of the *Small Pox*, *Purple Feavers*, *Agues*, in the Summer precedent, and hovering all *Winter*, do portend a great Pestilence in the *Summer* following, for Putrefaction doth not rise to its height at once.

A dry *March* and a dry *May* portend a wholesome *Summer*, if there be a showring *April* between; but otherwise it is a sign of a Pestilential Year ———

Maxima pars rerum quæ scimus, est minima pars rerum quæ nescimus.

William Andrews.

SPitting Drops, by Dr. *Archer*, Authour of the Book, called every Man his own Doctor, that any one may safely take in a Morning and go about his business. It doth powerfully discharge the Head, Stomach, and all the Body of vicious Humours, and cures the *Gout*, with several other Diseases which he cannot here insert. He is to be spoke with at his Chamber at the *Sadler's* against the *Mewse* by *Charing Cross*, next the *Black-Horse*, from Noon till Five of the Clock, at other times at his House at *Knight's Bridge*, where he hath all Conveniences in a good Air, for the Cure of *Sick*, *Melancholy* or *Consumptive* Persons.

THere is now in the Press, and will be finished in Six Months a Book entituled, *Cursus Mathematicus*: A Mathematical Sciences methodically disposed in such order as they ought to be read and practised by such as would attain to a compleat proficiency in them by their own Industry in Nine Books, by *William Leybourn*, *Philomathemat.* The Proposals with an *Analysis* of the whole work, are to be had of several Booksellers in *London*, and in divers other parts of *England*. The price to Subscribers will be 10*s.* in Quires.

RUptures or Broken Bellies cured, and all sorts of Trusses made easie, beyond any yet in *England*, by *R. Collins*, (Approved of and Licensed by the President, Censors of the Colledge of Physicians, *London*) at the Bell on the Ditch-side near *Fleet-Bridge*, to be spoken with from Nine to Twelve in the Morning, and in the Afternoon at the Bell in S. *Jounits* in *Clerkenwel* Parish.

FINIS.
